**MOUNTING BRACKET AND SENSOR BAND**

For sensor switch use

- **Mounting bracket for tie-rod standard cylinder**
  - Apply to φ32~φ150

- **Mounting bracket for ISO6431 standard cylinder**
  - Apply to φ32~φ100

**How to order**

- **ZFAF32** Apply to φ32, φ40
- **ZFAF50** Apply to φ50, φ63
- **ZFAF80** Apply to φ80
- **ZFAF100** Apply to φ100

**Sensor band for round cylinder PC, PCL series from φ12~φ40**

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Start by keeping screw 3 to 4 turns into barrel nut on the end of the band assembly.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Place the screw head into clamp slot and wrap the band around the cylinder. Position the pin with the nearest hole on the band and mark the hole with a permanent mark.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Remove clamp assembly from the cylinder. Locate the marked hole that fits to the cylinder size, cut the band at midway between the next two adjacent holes. (The one that's further away from the screw nut)</td>
</tr>
<tr>
<td>Step 4</td>
<td>Insert cut end of the band into a flat slot opposite from the clamp slot. Place the chosen hole over the pin and bend the band firmly down with thumb pressure. Then wrap the band around cylinder barrel and re-insert screw head into clamp. Position the switch and tighten.</td>
</tr>
</tbody>
</table>

**How to use sensors properly**

1. Particular attention must be paid not to exceed the working limits list.

2. Reed switch type connection polarities must be respected, that is the brown wire series load to the positive(+) and the blue to the negative(-) of power source. If these are inverted the sensor remains switched, the load connected and the LED turned off. However, this would not damage the circuit.

3. Solid state type connection polarities must be respected, that is the brown wire to the positive(+) and the blue to the negative(-) from DC power. The black wire have to connect to the load. If black wire was connected to power source, the sensor would be damaged.

4. The external protect element is required if sensor is used to switch conductive load. In case of DC conductive load, e.g. relay, solenoid valve. Attach an external diode parallel to the conductive load. And use R-C circuit to replace diode for AC conductive load.

5. Keep out of the strong magnetic field to get rid of interference.
